

Activity - 01

Computer Vision - I/A 0502

1) a) - Contrast stretching transformation

b) - It increases the contrast b/w darker tissues and brighter bones, making soft tissues and brighter bones making soft while preserving details.

c) - Dark tissues becomes clear

Overall image Contrast Improves

2) a) - log transformation

b) - log transformation Expands low intensity pixel values, revealing hidden details Negative transformation only inverts brightness & does not effectively enhance dark regions

c) - Parking lot appears brighter
- Objects such as vehicles & people become easier to identify.

3) as-Contrast stretching

b) - Enhances the Contrast b/w finger-print ridges & valleys, making the ridge patterns for accurate recognition.

c) - log transformation Would brighten the darker regions but may reduce the distinction b/w ridges & valleys
